DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/3/08 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4, 8, 12-14, 23, 26, 27, 30, 33, and 35 are rejected under 35 U.S.C. 103 as being unpatentable over United States Patent 5,653,748 Strecker in view of United States Patent Publication 2003/0121148 A1 DiCaprio.

Strecker discloses the invention substantially as claimed being a prosthetic delivery device (10) comprising a flexible elongated member (11) having proximal and distal ends, a means for releasably securing an expandable stent prosthesis (15). The device further comprises a crocheted material (14) including a thread having a plurality of loops and a trigger pull release (24). However Strecker fails to disclose a visual

marker comprising a colored loop extending around the prosthesis that is a different color than the releasing means.

DiCaprio discloses a stent having radiopaque bands that have different colors when looking fluoroscopically in the same field of endeavor for the purpose of enhanced trackability.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the radiopaque bands of DiCaprio with the delivery device of Strecker in order to enhance the trackability of the implant.

Claims 9-11 are rejected under 35 U.S.C. 103 as being unpatentable over United States Patent 5,653,748 Strecker as modified by United States Patent Publication 2003/0121148 A1 DiCaprio as applied to claims 1-4, 8, 12-14, 23, 26, 27, 30, 33, and 35 supra, and further in view of United States Patent 5,480,423 Ravenscroft.

Strecker as modified by DiCaprio discloses the invention substantially as claimed being described supra. However, Strecker as modified by DiCaprio does not disclose that his prosthesis expands to a larger radius and a shorter length upon implantation

Ravenscroft teaches the use of a prosthetic delivery device comprising a length shortening self-expanding stent in the same field of endeavor for the purpose of providing a concentrated expansion force within a body lumen, shown best in figures 2a – 2f.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the stent of Ravenscroft with the delivery device of

Strecker as modified by DiCaprio in order to provide a concentrated expansion force within a body lumen, which can be accurately tracked by the operator throughout the insertion process.

Response to Arguments

Applicant's arguments with respect to claims 1-4, 8-14, 23, 26, 27, 30, 33, and 35 have been considered but are moot in view of the new ground(s) of rejection.
